Power Pick® Global

Warehouse Management Software

kardexremstar

Your flexible software solution for storage and retrieval systems.

Power Pick Global Warehouse Management Software is designed to manage storage and retrieval systems. It can be configured for single workstation as well as multiple work zones. Its scalable design can match customer needs today and in the future. Designed to meet the highest quality standards, Power Point Global can be tailored to various requirements. This software maximizes the storage density with in the unit, eliminates wasted search time for misplaced items and prevents out-of-stock inventory. It offers complete inventory control and increased levels of productivity.

Why choose Power Pick Global?

Accuracy
From standard validation via barcode to weight control to a variety of pick to light technology, Power Pick Global adds greater accuracy to the operation. Integrating light directed picking technology, such as TIC, laser pointer or batch light into the process can increase accuracy up to 99.9%.

Efficiency
Power Pick Global increases efficiencies by lowering processing times. Batch picking, multi order picking and time optimized movement of storage systems minimizes turnaround times and increases throughput.

Security
User and group rights can controll-access to the system and to storage locations. Power Pick Global also logs every transaction by user for complete transparency.

Flexibility
With maximum flexibility, it's only a few clicks for custom reports, to create an on screen list, add an additional material information field, or to save new data on the fly. It's even possible to easily adapt the appearance of software.

Designed as a base package (KeyTech) with multiple add-on options, Power Pick Global can be customized to meet the exact needs of each application. The base package (KeyTech) provides simple storage and retrieval of goods, stock management, space management, simple reporting and easy management of user rights.

KeyTech Base Package Includes:
- Bin Management
- Location Management
- Material Management
- User License

Additional Options Available:
- Advanced Reporting
- Area Management
- Batch Lights
- Batching
- Client Management
- Cost Center
- Database Configuator
- Display Tool
- Height Management
- Host Managed Inventory
- Host Transfer
- Hot Transactions
- Kiosk Storage
- Kit Handling
- Label Printing
- Lot & Qualification Handling
- Order Management
- Physical Inventory
- SAP Integration
- Serial Number Handling
- SMD Handling
- User I/O Peripherals
- Visual Location Search
- Web Services Integration
- Weight Management
- Zone Handling

For convenience, Power Pick Global is available in 3 pre configured applications

Smartpick 5200

### The perfect solution for electronics order picking

Smartpick 5200 was designed to enhance inventory management in the electronics industry - improving productivity, reducing space requirements and increasing pick accuracy. Specifically, SMD component handling is simplified. At storage, the charge / serial numbers are recorded and during picking process the correct charge / serial number is predetermined, virtually eliminating picking errors.

Most important characteristics:
– Special handling of SMD components
– Full retrieval of stock from the storage to the production line
– Automatic generation of the return order with the difference in quantity
– Recording the charge / serial number at storage and specifying the charge / serial number at picking
– Minimum stock level monitoring

Smartpick 5200 Options included:
– KeyTech Options
– Cost Center
– Host Transfer
– Label Printing
– Lot & Qualification Handling
– Order Management
– Serial Number Handling
– SMD Handling
– Zone Handling

Smartpick 6000
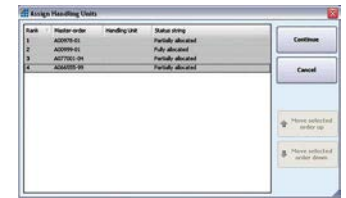

Efficient order picking with high throughput

Smartpick 6000 supports multi-order and multi-user picking strategies. Multi-Order Picking (batch picking) bundles several orders together into a batch order allowing the operator to pick materials required for several orders at one time. The materials picked are distributed to the individual orders in the required quantities. Multi-User-Picking enables several operators to pick at the same time. With the help of automated light systems the operators are directed to the respective order tote or box. Picking errors are thus reduced to a minimum.

Most important characteristics:
– Automatic batch creation with various picking strategies possible
– Assignment of the individual order in a batch to an order tote or box
– Multi-Order Picking/Batch Picking
– Pick-to-Light Integration

Smartpick 6000 Options included:
– KeyTech Options
– Batch Lights
– Batching
– Cost Center
– Host Transfer
– Label Printing
– Order Management
– Zone Handling

Cleverstore 1000

The clever solution for storage and retrieval of materials.

Cleverstore 1000 is the solution for efficient storage and retrieval of materials. Besides management of storage space and stock various protocols and reports enable smooth storage processes. This software ideally complements Kardex Remstar dynamic storage systems.

Most important characteristics:
– Stock management of materials
– Management of storage spaces
– Recording of putting and retrieval
– Recording of stock corrections
– Select storage space by means of a graphical display (visual storage space search)
– Documents and images can be assigned to the material
– Display of the material image at the storage space possible

Cleverstore Options included:
– KeyTech Options
– Visual Location Search
